Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code will be showcased in the future through a screenshot. The model validation and evaluation report will include classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

Initial Model Training Code:

```
#K-means clustering
from sklearn.cluster import KMeans
model=KMeans()
kmeans = KMeans(n_clusters=4, init='k-means++', random_state=0).fit(df)
df['cluster_num'] = kmeans.labels_ #adding to df
print (kmeans.labels_) #Label assigned for each data point
print (kmeans.inertia_) #gives within-cluster sum of squares.
print(kmeans.n_iter_) #number of iterations that k-means algorithm runs to get a minimum within-cluster sum of squares
print(kmeans.cluster_centers_) #Location of the centroids on each cluster.
```

```
kmeans.fit(df)

/usr/local/lib/python3.10/dist-packages/sklearn/cluster/_kmeans.py:870: FutureWarning:
warnings.warn(

▼ KMeans
KMeans(n_clusters=4, random_state=0)
```

Model Validation and Evaluation Report:

Model	Classification Report	Accuracy	Confusion Matrix
KMeans Clustering	-	-	-
